## CSS326-24G-2S+

The CSS326 is a network switch with 24 gigabit ethernet ports and two SFP+ cages (modules are not included). The device is ready to use as a switch. To access its full functionality, you need to connect to the SwOS web interface.

### Powering

The board accepts powering in the following ways:

- direct-input power jack (5.5mm outside and 2mm inside, female, pin positive plug) accepts 10-30V DC
- The ethernet port accepts passive Power over Ethernet 8-30V DC, PoE injector is not included

The power consumption of this device under maximum load is up to 19W

### Configuration

The CSS is set up as a switch, with 192.168.88.1 as the management IP accessible from any port. You can connect to the SwOS configuration interface by opening <http://192.168.88.1> and using admin as the login name. There is no password by default.

### Reset button

Hold this button during boot time and release after LED light stops flashing to reset SwOS configuration and load primary backup firmware.

Access to primary firmware allows reinstallation of the main firmware.

### Operating System Support

The CSS runs SwOS, which is the only supported OS for this device. Information about SwOS: <http://wiki.mikrotik.com/wiki/SwOS>

### CSS326 SwOS features

- Non-blocking Layer 2 Switching Capacity
- 16K Host table
- IEEE 802.1Q VLAN
- Supports up to 4K simultaneous VLANs
- Port isolation
- Broadcast Storm Control
- Port Mirroring of ingress/egress traffic
- MikroTik neighbor discovery
- SNMP v1
- Web-based GUI

# Cloud Router Switch series

## Setup Guide and Warranty Information

The CRS is a highly configurable switch, powered by RouterOS. It has 24 Gigabit ports. Three models currently available:

- CRS125-24G-1S-2HnD-IN (integrated wireless, indoor case)
- CRS125-24G-1S-IN (indoor case)
- CRS125-24G-1S-RM (rackmount case)

## First use

The device comes preinstalled with RouterOS and is ready to use. Device is compatible with RouterOS v6 and newer, if your device comes preinstalled with an earlier version, please upgrade before using it.

The Ethernet ports 2-24 are switched, and the device can be accessed via these ports though the IP **192.168.88.1** username is **admin** and there is **no password**. Please connect with your web browser to this IP address to configure it. Ethernet port 1 is configured as a DHCP client and has firewall on it. The SFP port is configured the same way as Ether 1, with a firewall and DHCP client on it. The Ether1 port also supports PoE input (see below note), and can be used for Netinstall recovery mode.

Please note that for the wireless model, default wireless password is the same as unit serial number. You can check this on the sticker, serial number is 12 symbols long.

See this page for connection and configuration guides: <http://wiki.mikrotik.com/wiki/Category:Manual>

## Powering

The device accepts powering in the following ways:

- Direct-input power jack: 10-28V (24V 0.8A PSU included)
- PoE input via passive PoE injector on Ether1 10-28V, PoE injector included (PoE support only where indicated on the label, earlier production units did not have PoE on Ether1, and hence did not have PoE indicated on the Ether1 label).

## Extension Slots and Ports

- Twenty four (24) 10/100/1000 (Gigabit) Ethernet ports (Auto MDI/X)
- One SFP cage, compatible with 1.25G SFP modules
- Only CRS125-24G-1S-2HnD-IN: Built in 802.11b/g/n 2GHz wireless access point

## Resetting the device

In case you wish to return the device to its original configuration, you can use the RESET button. Hold this button during boot time until LED lights start flashing, then release the button to **reset RouterOS configuration**. You can use this procedure if you have forgotten the password to access the device, or simply wish to return the unit to its default configuration state.

See [www.routerboard.com](http://www.routerboard.com) for more information. Contact [support@mikrotik.com](mailto:support@mikrotik.com)
